

Detectaplast®

Professional wound care for the professional
in the food industry, catering and kitchen

THE CAPTAIN OF WOUND CARE

Professional wound care for
professionals in the construction,
medical and retail industries

Protectaplast®

About us

Detectaplast® was founded in 2002 and is the specialist in detectable blue first aid material for the food industry, the catering industry and industrial kitchens.

We meet the growing demand for detectable first aid products for professional use. Food safety is a priority throughout the world, and we are working to guarantee it.

Our years of experience in the industry and close contacts with our distributors have given us a clear understanding of the needs of the consumer.

This knowledge enables us to continuously invest in the development of new products. This allows us to offer the most complete range of detectable plasters.

We are a real authority on plasters

Is it a cut, an abrasion or a burn? Is it on the finger, the fingertip, the knuckle, in the palm, on the arm or in a place that is hard to treat? We have a specific plaster for each application and every place. All our products comply with current quality systems such as HACCP, BRC, IFS, etc.

More than just plasters

In addition to a wide range of detectable wound care products, we also offer hygiene products, protective materials and various first aid materials, such as first aid kits, stretchers, burn products, disinfection products, finger bobs, various creams, etc.

Global presence

We supply wholesalers throughout the world who distribute our detectable products to the food industry, the catering industry, industrial kitchens, bakers, butchers, sandwich shops, etc. We support them as much as possible with information about the products, as well as about legislation and the market.

In addition, we provide supporting marketing materials to promote our products. Starting from certain volumes, it is possible for you to have your own brand.

Legislation and regulations

We comply with the European MDR and national legislation and guidelines on first aid and products. Our ISO9001 quality certificate guarantees this.

Our ISO 9001 certified quality system: 2015 ensures that our organisation continuously improves and that our products are developed and distributed in accordance with laws and regulations.

As a manufacturer and distributor of medical devices, we are registered with the Belgian Federal Agency for Medicines and Health (FAMHP). The traceability and safety of the products are essential.

Our products meet European requirements:

- European Medical Device Regulation MDR 2017/745
- Biocidal Products Regulation EC 528/2012
- Cosmetics Regulation EC 1223/2009

“ Our priorities are quality and service. We seek always to offer the best products and to do so quickly and efficiently. Our company structures are optimised and automated as far as possible. This way, we can always guarantee the smooth and correct handling of your order. ”

Wouter Jacobs, Managing Director

WHAT & HOW

Why Detectaplast® blue detectable plasters?

Safety and hygiene are of utmost importance in the food industry. Suppose that a blood stained plaster is found in your yogurt container, or your soup in a restaurant, in the minced meat at the butcher, or in the bread at the baker's. This must be prevented at all times to be able to guarantee food safety.

European directives apply to this along with various quality control systems, such as **HACCP***, **IFS***, **BRC***. All companies involved in the preparation, processing, packaging, distribution and the transport of foodstuffs must have first aid materials that satisfy these standards.

Detectaplast® offers a complete range of detectable first aid products that meet these strict but necessary standards.

*HACCP

HACCP, the acronym for Hazard Analysis and Critical Control Points, is a risk assessment system for food safety. This entails an analysis of hazards and critical control points.

HACCP is not manual of requirements but rather a system based on 7 principles. Companies must apply this system to their own situation. Each undertaking states where and at what phase of the production and/or distribution processes there could be hazards to the health of consumers. It also sets out the measures that are to be taken to prevent threats to consumer health, the controls to be carried out, and the results of these

*IFS

German retailers have developed a certification standard that matches the English BRC standard on many points: the IFS (International Food Standard). French retailers have also adopted the IFS standard. The Italian retail association, Ancc, Ancd and the Federdistribuzione, also support the IFS standard. As with the HACCP under the IFS first aid products must be detectable.

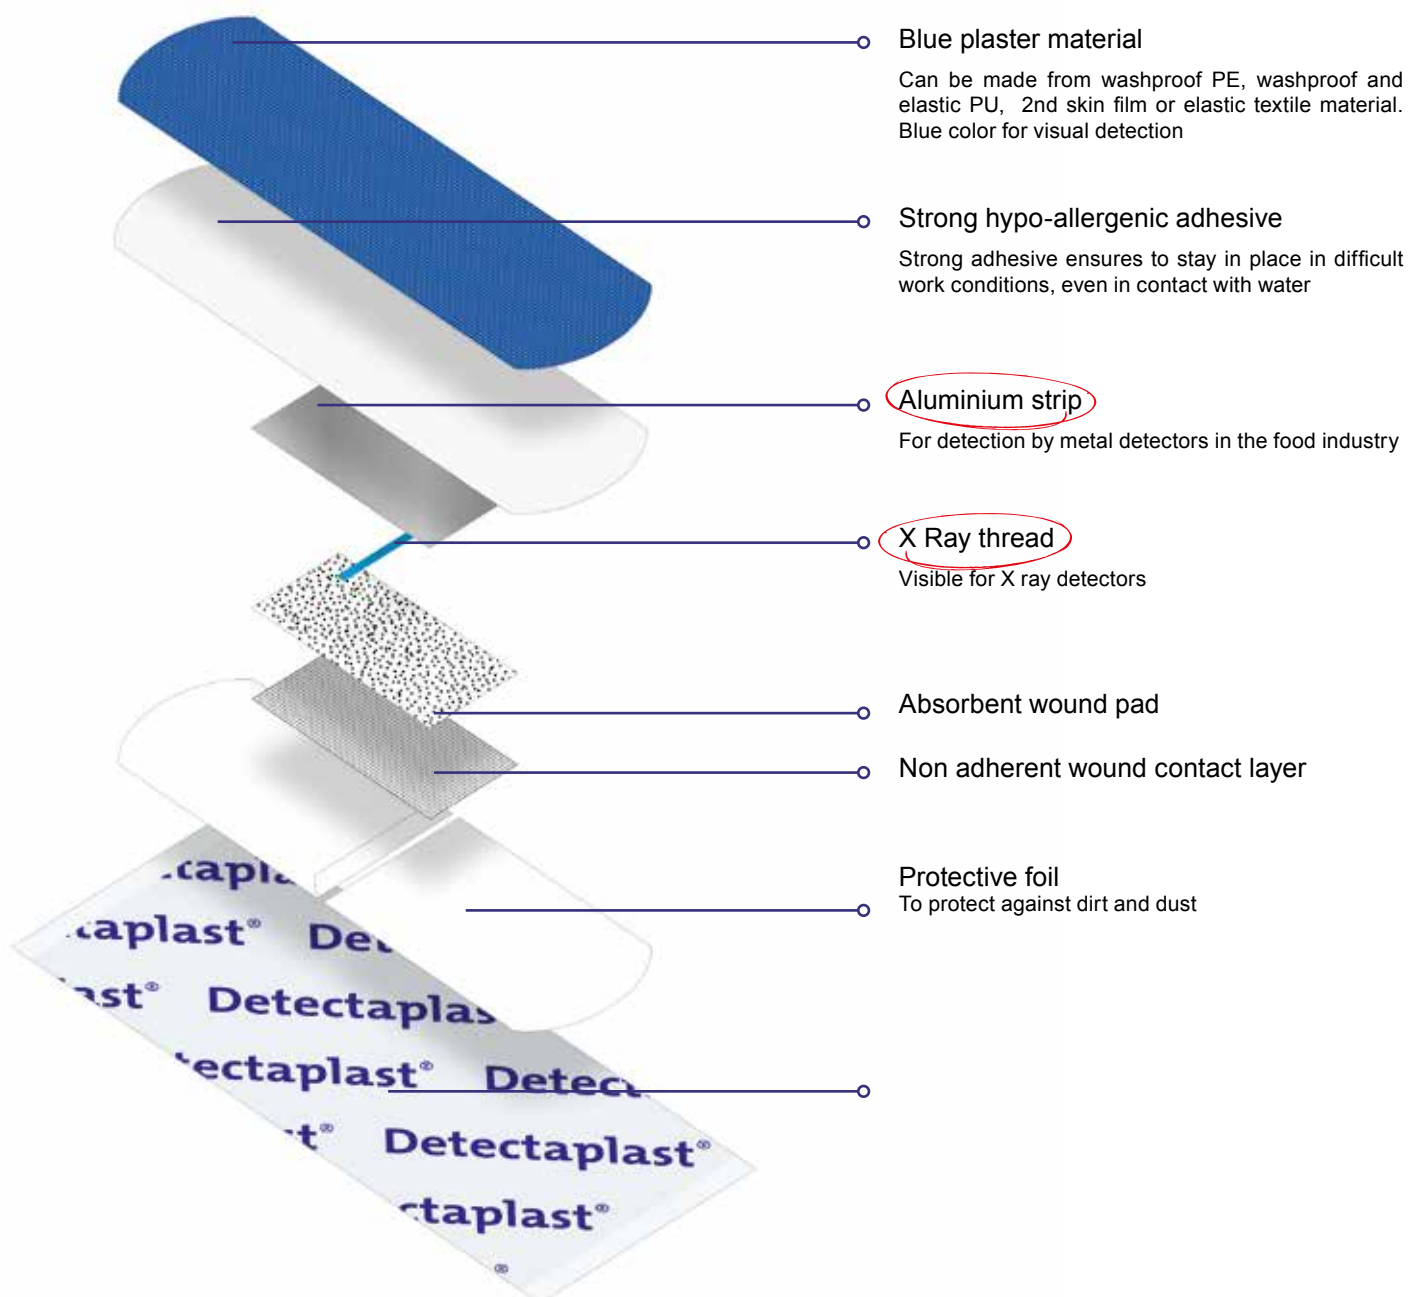

*BRC

The British retailers developed a common standard for the entire industry in 1998. BRC stands for British Retail Consortium, the association of British retail organisations. The BRC standard describes the hygiene and food safety requirements for food processing businesses that supply the retail sector directly.

The BRC has similarities to and overlaps the HACCP. The BRC also requires a risk analysis in accordance with the HACCP and the critical points for food safety (CCPs) must be guaranteed throughout the production process. The BRC requires more, however, in the area of hygiene and civil engineering. A HACCP certified company would have to arrange and explain some additional aspects..

How are the Detectaplast® blue plasters detected?

All Detectaplast® detectable blue plasters have been specially designed so they will not end up in the food chain. How does this work?

A plaster for every application

Plasters with various dimensions

In addition to various quality plasters, each with their own application, Detectaplast® also offers plasters in various sizes in order to provide the best care possible at any place on the body.

In addition to the classic dimensions, we have long finger plasters (12 cm and 18 cm long), developed for optimal fixation around the joints of the fingers. The knuckle plasters are specially designed in an H-shape

for comfortable protection of the knuckle. The butterfly plasters are also designed to cover a wound on the fingertip. Finally, plasters on a roll are available in a dispenser that makes it easy to cut them to fit.

Metal detectable plasters

PREMIUM

The Detectaplast® Premium plasters are water repellent, contamination resistant and elastic, made from strong PU (polyurethane) material. The microperforated PU-film allows the skin to breathe, which is important for proper wound healing. This also prevents the skin from becoming moist under the plaster, which would allow the plaster to loosen more quickly. The PU-film also protects the wound from water, dirt, bacteria and viruses.

50 pcs/box

SECOND SKIN

The Detectaplast® 2nd skin plasters are water repellent, contamination resistant and elastic, made from thin PU (polyurethane) material. The PU-film is thinner than the Premium plasters and feels like a second skin. This makes the plaster still more comfortable to wear. The PU-film allows the skin to breathe, which is important for proper wound healing. This also prevents the skin from becoming moist under the plaster, which would allow the plaster to loosen more quickly. The PU-film also protects the wound from water, dirt, bacteria and viruses.

HYDROGEL PLASTERS

The Detectaplast® Hydrogel plaster is suitable for small first degree abrasions and burns as well as for chronic wounds that do not heal well. The hydrogel contains 60% water, has a slight cooling effect and reduces pain. The plaster creates a moist wound environment for quicker healing. The PU-film allows the wound to breathe and obstructs bacteria. Not suitable for wounds with heavy discharge given its limited absorptive capacity..

- for protection of the skin
- resistant against acids, solvents and fats
- retains the dexterity
- adapts perfectly to the finger
- very strong and supple
- does not affect the blood circulation
- produced to meet the HACCP, IFS and BRC standard
- slightly pre-powdered
- specially made for the food industry, catering & kitchen

20050

Rubber finger bobs

50 pcs/box

BURN CARE

Detectaplast Burn Care products are based on a water-soluble gel (hydrogel) that draws heat from a burn while relieving pain, cooling the skin and protecting it from airborne contamination.

Applying Detectaplast Burn Care as soon as possible draws heat away from the burn and prevents heat from penetrating deeper into the skin.

BURN GEL

9308

Burn Care Gel

- the gel covers burns and keeps the wound moist
- emergency supply for 1st and 2nd degree burns

Fire blanket EN 1869:2019 Certified

Detectaplast fire blanket is a simple and practical cloth made of woven fiberglass, designed to extinguish small fires. Tolerates temperatures up to 550°C. Smothers the fire and cuts off the oxygen supply. Can also be used to wrap a burning object or person.

Fire blankets complying with EN 1869:2019 are suitable for extinguishing small incipient fires, such as a flame in a pan of oil or a burning garment. They should not be used for larger fires where the fire has already spread and the situation has become dangerous.

5010

Fire blanket 120 x 180 cm

- Complies with EN 1869:2019
- Suitable for single use
- Made of 100% fiberglass fabric
- *Not suitable for severe grease or oil fires*

Hygiene aids

Detectaplast Nitrile gloves are a hygienic tool. Nitrile offers good resistance to various chemicals and protects your hands from oil, bleach and solvents. The fingertips have a roughened, anti-slip finish. Not only are the gloves strong and rugged, they offer excellent tactile sensitivity for all types of work. They are resistant to pressure and stretching, lightweight and comfortable. The anti-allergic gloves are completely latex-free and made of 100% resistant nitrile. Suitable for allergy sufferers and those with sensitive hands.

Nitrile is the synthetic alternative to latex gloves.

Detectaplast Nitrile gloves are suitable for food industry, medical applications, industry, beauty sector, etc

9133.100

Nitril gloves blue – 100 pieces/box

- Super strong quality of 4.0 Mill.
- Good dexterity (textured fingertips)
- Resistant to pressure and stretching
- Anti-allergenic
- 100% latex free
- Available in XS - S - M - L - XL - XXL

Plaster for blisters

BLISTER PLASTER

Although blisters are often small, they can cause a lot of trouble and be very painful.

Due to the constant friction of your clothing, there is a good chance that your blister will burst, and then the risk of infection is extra high. Protectaplast® offers professional-quality blister plasters for optimal protection
